

Protective coating for nets

NetCare+

NetCare+ is an eco-friendly, hard wearing, and specially designed product for users who want to avoid using anti-fouling products that contain biocides.

NetCare+ protects the net from UV radiation, reinforces its breaking strength and finally extends the net's lifecycle. It strengthens and protects sensitive parts of the net cage, covering sewing lines, ropes and threads.

The durability of the coating depends upon the handling of the nets and the frequency and means used for their cleaning process (washing machines, high pressure devices, etc.).

The impregnation with NetCare+ can be performed by simply dipping the nets into the product. The impregnation application is recommended to be carried out by specialized installations (service stations) that have all necessary equipment.

NetCare+ is free of biocides.

Protective coating for nets

NetCare+ is an eco-friendly, hard wearing, and specially designed product for users who want to avoid using anti-fouling products that contain biocides. NetCare+ protects the net from UV radiation, reinforces its breaking strength and finally extends the net's lifecycle. It strengthens and protects sensitive parts of the net cage, covering sewing lines, ropes and threads.

Application:

NetCare+ can be applied on both new and used nets. It is important to make sure that the nets have been cleaned and dried before applying NetCare+. The impregnation application is recommended to be carried out by specialized installations (service stations) that have all necessary equipment. Since it is water based, nets treated with NetCare+ must not be exposed to water or moisture until they are completely dry.

Utilisation:

Nets treated with NetCare+ should be placed in the sea according to the users' guide issued by the net supplier and should be carefully handled in order to prevent wear/damage to the coating. There are no special requirements regarding protective equipment. Nevertheless, we recommend that all personnel working with nets to wear gloves.

Specifications:

| | |
|---------------------------|--|
| COLOUR | Black or white |
| CLEANING AGENT | Water |
| APPLICATION METHOD | Dipping |
| APPLICATION AREAS | New and used nets made of polyamide / polyester / UHMWPE (Dyn) |

Cleaning Nets:

Nets treated with NetCare+ should preferably be cleaned professionally in a net cleaning facility. If cleaning in the sea, it is highly recommended extra caution during hosing or other type of mechanical cleaning. Frequent mechanical cleaning may remove the coating and may cause damage to the net.
